Track 'n Trade Futures EOD

Bulls 'n Bears Trading System

Seasonals Plug-in

Candlestick Auto Recognition Plug-in

Historical Simulator Plug-in

Options Plug-in

Spreads Plug-in

Commitment of Traders Plug-in

### Features

Drag 'n Drop, One-click trading.

Place simulated orders on the chart with a simple click of the mouse. Never miss another trade.

Proprietary Buy/Sell Signals

The Bulls 'n Bears Trading System generates customizable signals based on proprietary mathematic formulas. You will not find this unique award winning trading system anywhere else. It only works with Track 'n Trade.

Generate Spread Charts

Choose between two commodity contracts you would like to create a spreads charts for and then simulate placing both orders on opposing contracts and calculate your hypothetical profits and losses

Fibonacci, Elliot Wave, Gann Fan, Andrews Pitchfork tools

These tools are based upon numbers in nature, crowd psychology, geometric patterns, and other factors to predict market movements. Avoid being easily swayed by media reports.

Practice Trading Risk-Free with Real Data

With 30 years of historical data at your fingertips, turn your software into a digital video recorder (DVR) and play back market data just like you would your favorite TV shows.

**P** A ribbon indicator to identify trend strength

Bands separate and keep a similar distance as trends strengthen and come together as trends reverse. An unequal distance (too wide or too narrow) can indicate overbought or oversold. Don't be fooled by false signals anymore.

Indicators including moving averages, pivot points, slow stochastics, RSIs

These signals are based off converging and diverging chart formations and can provide excellent buy/sell signals.\*\*

Identify formations using time zones, arcs, forks, and more.

Traders used to have to mark their charts using a ruler, compass, or pencil. Now making these annotations can be done in seconds. Wedges, fans, head & shoulders, and channel drawing tools can be selected for quick drawings.

**P** Advantage Lines

Get the early-entry customizable trading signals of this short-term proprietary trading system without the whipsaw normally only seen in long-term moving averages.

See when large industry leaders enter and exit the markets.

Using Commitments of Traders (COT) reports available weekly to the public, our COT indicator generates customizable buy/sell signals based on cues from the market movers. Truly a unique indicator that doesn't rely on price.

Use past seasonal events to predict future trends

The futures market is often affected by weather patterns, consistent supply and demand cycles, and other annual trends. The seasonal indicator averages historical data and represents it neatly as a histogram.

Save all your open charts while retaining all preferences and customizations.

No starting over like some java-based web applications. Everything will be exactly the way you left it. Pick up right where you left off.

Built-in dollar calculator

Assess risk level for any trade. Find out how much a potential trade will cost if you're wrong and what the potential gain is if you're right.

 *Feature exclusive to the Premium Futures bundle*
